According to the FDA, “Scientific evidence suggests but does not prove that eating 1.5 ounces per day of most nuts, such as pistachios, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease.”

Pistachios, with 6g protein, are a “good source” and “complete protein,” with 10% DV, and contain all the essential amino acids. Gram for gram pistachios have as much protein as an egg.

A one-ounce serving of pistachios equals 49 nuts — more per serving than any other snack nut.

Pistachios, like olive oil, primarily contain monounsaturated fat. The Dietary Guidelines for Americans recommend you get most of your fats from sources of polyunsaturated and monounsaturated fatty acids.

You can obtain about as much dietary fiber from a serving of pistachios (2.9g, 12%) as from a 1/2 cup cooked broccoli (2.5g, 10%).

2 oz of pistachio kernels has more potassium (580mg, 16 percent DV) than a large banana (487mg, 14 percent DV).

Pistachios are a naturally cholesterol-free snack that contain only 1.5g of saturated fat.
